## WELCOME

I scored 89 in JAMB Physics. Then I scored 87 the following year when I helped my younger sister prepare. I've taught over 200 students who needed strong Physics scores for Engineering and Medicine, and I've seen the same mistakes repeated every single year.

Most students approach JAMB Physics like they're studying for school exams. They memorize formulas without understanding. They solve random questions without seeing patterns. They panic when they see unfamiliar wording on familiar concepts. This approach fails because JAMB tests application, not memorization.

This book contains 10+ years of actual JAMB Physics questions with detailed solutions that show you exactly how to think through each problem. I've organized everything by the patterns I discovered while analyzing thousands of questions. You'll learn to recognize question types instantly, eliminate wrong answers systematically, and solve calculations using shortcuts that save precious minutes.

What this book is NOT: a textbook replacement or a miracle cure. You still need to understand basic Physics concepts from your SSCE classes. This book assumes you know what velocity, force, and resistance mean. I focus on showing you how JAMB tests these concepts and how to answer their specific question formats.

## *READ THIS FIRST*

*JAMB Physics rewards accuracy over speed. Students who rush through 50 questions in 40 minutes and guess on 15 of them score lower than students who carefully complete 45 questions and get 42 correct. Precision beats panic every time.*

If you're targeting competitive courses, you need 70+ in Physics. With consistent practice using the methods in this book, that score is absolutely achievable. I've guided students from 45 to 78, from 52 to 81, from complete confusion to confident mastery.

Let's begin.
